DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claim 29 is rejected under 35 U.S.C. 102(b) as being anticipated by Greeves (US Patent No. 4449501). See Figs. 2 and 3, col. 1, lines 28-42, col. 2, lines 7-16, lines 25+, col. 3, lines 10-20. The embodiment which reads on applicant's invention is the one disclosed at col. 3, lines 10-20. This embodiment teaches the use of two pressure signals within the combustion chamber. The first one occurs prior to start of combustion at point E of Fig.3, the second occurs after combustion. A ratio is obtained from these two values and is compared to a desired ratio. Based on these results a fuel lever is adjusted such that combustion starts at a desired point.
- 3. Claims 1-58 are rejected under 35 U.S.C. 102(e) as being anticipated by Yamamoto et al. (US Patent No. 6810320). See the abstract.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 6. Claims 1-28 and 30-58 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flynn et al (US Patent 6276334) in view of Greeves. Flynn et al teach an engine operating similar to applicant's invention. Flynn et al recognize that the pressure history of the combustion chamber is critical and affects the start of combustion (SOC). Flynn et al, however, do not appear to teach using two pressure signals one prior to combustion and one after combustion to aid in correcting the start of combustion. Greeves has already been discussed above and teaches the use of two pressure signals one before and one after combustion to aid in adjusting start of combustion. It would have been obvious to one of ordinary skill in the art to have used the technique taught by Greeves in Flynn et al's engine to determine when to make adjustments for SOC based on the two said signals since this would have been a substitution of

Art Unit: 3747

known equivalents. Furthermore, the type of sensor used to determine the pressure is considered an obvious matter of design choice as is the types of fuel used.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Erick R. Solis whose telephone number is (703) 308-2651. The examiner can normally be reached on Monday-Thursday.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0861.
